```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Binds syntaxins.

C:- SUBUNIT: Interacts with both SYP41 or SYP42 and VTI12, but in different domains of the trans-Golgi network. Does not interact the pervacuolar compartment with VTI11, SYP21 or SYP22, or on the gervacuolar compartment with VTI11, SYP21 or SYP22, or on the Golgi with SYP31.

C:- SUBCELLULAR LOCATION: Peripheral membrane protein. Binds to trans-Golgi network membranes through interaction with other proteins Golgi network membranes through interaction with other proteins c:- SIMILARITY: Belongs to the STXBP/UNC-18/SEC1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               EMBL; AF036234; AAC39472.1; -.

Mol. Biol. 231:196-204(1993).

-I- FUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription terminatic factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts (By similarity).

-I- SUBCELLULAR LOCATION: Nuclear (Probable).
-I- DEVELOPMENTAL STAGE: Barely detectable in stage I/II occytes, accumulate in stage III/IV occytes, then exhibit a roughly constant steady state level in mature occytes, eggs, and early

J. MOL. Biol. 231:196-204(1993).

I. FUNCTION: La protein plays a role in the transcription of RNA
polymerase III. It is most probably a transcription termination
factor. Binds to the 3' termini of virtually all nascent
polymerase III transcripts (By similarity).
polymerase III transcripts (By similarity).
1- SUBCELLULAR LOCATION: Nuclear (Probable).
1- DEVELOPMENTAL STAGE: Barely detectable in stage I/II occytes,
accumulate in stage III/IV occytes, then exhibit a roughly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Groelz D., Bachmann M.;

Submitted (OCT-1996) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor form of RNA polymerase III transcripts including the polymerase including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts including the procursor form of RNA polymerase III transcripts in the procursor form of RNA polymerase III transcripts in the polymerase III transcripts in the polymerase III transcripts in the polymeras

SUBCELLULAR LOCATION: Nuclear (Probable)
PYM: Phosphorylated (By similarity):
SIMILARITY: Contains 1 RNA recognition motif (RRM) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               FUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor form of RNA polymerase III transcripts including tRNA and 4.55, 55, 75
                                                                                                                                                                                                                                                                                                                                                                                                                                                            of RNA polymerase III transcripts including tRNA and 7-2 RNAs.

PYM: The N-terminus is blocked.

DISEASE: Sera from patients with systemic lup often contain antibodies that react with the La protein as if this antigen was foreign.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PTM: PHOSPHORYLATED. THE PHOSPHORYLATION C-TERMINAL PART OF THE PROTEIN.
PTM: The N-rerminary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor form of RNA polymerase III transcripts including tRNA and 4.5S, 5S, 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and 7-2 RNAs.

Nucleic Acids Res. 17:2233-2244(1989).

Nucleic Acids Res. 17:2233-224 (1989).

I polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor form of RNA polymerase III transcripts including tRNA and 4.5S, 5S, 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Cetartiodactyla; Ruminantia; Pecora; Bovoidea; Bovinae; Bos.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A;Cross-references: EMBL:X13698; NID:g755; PIDN:CAA31986.1; PID:g756
A;Note: part of this sequence was confirmed by protein sequencing
C;Comment: This protein associates with a variety of small RNA molecules,
ay act as a transcription termination factor.
C;Superfamily: ribonucleoprotein La; ribonucleoprotein repeat homology
C;Keywords: blocked amino end; phosphoprotein; RNA binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     N;Alternate names: autoantigen SS-B/La; ribonucleoprotein SS-B C;Species: Bos primigenius taurus (cattle) C;Date: 31-Dec-1900 #sequence_revision 26-May-1994 #text_change C;Accession: S03849
